

Producing the highest quality health and beauty products starts from the ground up. FLP begins by cultivating thousands of acres of rich, fertile soil in the United States, Mexico, and the Dominican Republic.

1

Each aloe plant starts out as a shoot, or "pup" that's clipped from the root of a mature plant. After approximately 3 years of careful cultivation, each mature aloe vera leaf is gently removed from the plant by hand with a small incision along the stalk.

2

Once a leaf is cut from the plant, it is quickly transported to the plant for processing so that the gel remains in its freshest, purest form.

3

The leaves undergo a thorough cleaning process where they're bathed several times in cool water and given a high-pressure wash. Any remaining debris is removed, and the leaves are inspected for defects.

natural + unique + effective

4
FLP's patented gel extraction system separates the clear aloe gel from the unwanted rind. The pure aloe gel is collected in stainless steel containers, filtered to remove unwanted rind and pulp material, and immediately goes through a patented stabilization process that protects it from oxidation and seals in its natural potency.

5
Once approved, the aloe is transported to our product formulation tanks, or, in the case of our Aloe Vera Gel, directly to the automated filling line. Our revolutionary bottling machine can produce over 50,000 bottles per shift. That's more than one bottle of aloe vera gel filled, sealed and packaged per second.

6
7
To ensure quality and consistency, quality control technicians inspect the bottles as they're filled and capped. The bottle is then imprinted with a permanent batch code number for identification and is hand-packed for shipping.

8
9
After stabilization, the gel undergoes extensive laboratory testing and analysis to ensure purity and consistency. Once the aloe gel has been tested and approved, it's transported to FLP's product manufacturing plant, Aloe Vera of America, in Dallas, Texas where it's put through a series of microbiological and quantitative testing.

FOREVER LIVING PRODUCTS MANUFACTURING FACILITIES

Forever was the first company in the industry to receive the prestigious International Aloe Science Council Seal of Approval. In addition, the FLP aloe vera drinks and many other FLP products carry the international Kosher and Islamic seals of approval as a further testament to their international acceptance and excellence.
